

Telligent Solutions announces our new proactive service offering – **N-tell** – that keeps your business-critical technology running at peak performance and reduces your network downtime.

Placing a strong emphasis on customer service, **N-tell** combines—in a single, low-cost offering—the technological benefit of remote network monitoring with the practical advantage of local, on-the-ground, professional IT expertise.

An alternative to the conventional time-consuming and expensive break/fix approach to IT support, **N-tell** actively prevents technical problems and network downtime from occurring in the first place. **N-tell** helps you achieve strong returns on your investments in technology, and avoids the business costs that arise when systems or devices fail.

Remote monitoring gives **Telligent Solutions** a round-the-clock real-time view of client networks and IT assets, so that early symptoms of trouble can be identified and remedial steps can be taken before problems become severe.

N-tell makes world-class, proactive support affordable and accessible to smaller companies. Because it's delivered by your known, trusted and locally-based IT service organization, it provides you with access to professional custom technology help when you need it.

Professional, proactive computer care – reassuring you that your network is up and running at peak performance.

For more information about **N-tell**, contact **Telligent Solutions** at (817) 236-6800 or visit www.telligent.com.
